

## How are the ramps secured to the ground?

---

At Easy Care Systems, Rapid Ramps are securely installed using appropriate fixing methods to ensure safety and stability. Depending on the surface, ramps can be:

- **Bolted to Concrete or Tarmac:** Using heavy-duty anchor bolts for a firm and permanent fit.
- **Ground Anchored on Grass or Gravel:** Secured with ground screws or stakes for a stable hold.
- **Free-Standing with Adjustable Feet:** Providing a non-permanent solution, ideal for temporary use or rental.

Our experienced installation team will assess your site and recommend the best securing method for your ramp.
