

## What is the difference between a shower chair and a commode chair?

---

A **shower chair** is designed to provide a safe and stable seating option for individuals who have difficulty standing while showering. These chairs are typically made from water-resistant materials and are placed directly in the shower or bathtub to assist with bathing.

In contrast, a **commode chair** serves as a portable toilet for individuals who may struggle to reach the bathroom in time. It usually features a removable bucket or can be positioned over an existing toilet, allowing for convenient toileting outside of the standard bathroom setting.

The **Eco Traveller SB7e** from Showerbuddy combines the functionalities of both a shower chair and a commode chair. This lightweight, foldable chair is designed for use in roll-in or accessible showers and includes a full portable commode bucket system. Its compact design makes it ideal for travel, providing users with both bathing and toileting assistance in one versatile device.
